Office password hunters are used by IT administrators to discover the passwords that are stored within the databases of office applications. If an application is properly protected, passwords will be difficult to obtain. But in the absence of protection, these passwords can be obtained relatively easily by a hacker. Some people might be interested in this type of information because they wish to crack the password database in order to retrieve a list of all the passwords. But the main concern is that if a hacker has access to the password database, he can take over that database and be able to view and modify any application that is using that database. Elcomsoft Advanced Office Password Breaker Enterprise contains a powerful tool for password hunters. This tool has a database of over 400 million passwords of popular office applications. These passwords can be cracked in less than a minute by this tool. Key features: Outstanding performance: Crack the passwords of popular office applications with ease.

Included office applications: Crack the passwords of Microsoft Office, Excel, Powerpoint, OneNote, Outlook, Outlook Express, and Firefox. Integrated brute force attack engine: A full-featured password cracking algorithm with a very powerful engine. Compatibility: Crack the passwords of Microsoft Office, Excel, Powerpoint, OneNote, Outlook, Outlook Express, and Firefox. Multiple modes: Crack the passwords of different user types within the same account, and the passwords are stored in different formats: a format that stores passwords in the old Netscape format and a format that stores passwords in the new Windows Vista format. Defragmentation: Very effective algorithm and weak passwords can reduce the file size by up to 90%.

Elcomsoft Advanced Office Password Breaker Enterprise 3.2.579 Incl Crack. Advanced Features of Elcomsoft Advanced Office Password Breaker Enterprise Brute force attack engine A brute force attack engine has a sophisticated algorithm for password cracking. If a password is too weak, this algorithm will be applied to crack the password. The cracking algorithm used by Elcomsoft Advanced Office Password Breaker Enterprise is considered very effective, especially for weak passwords. New

format New password databases created by Elcomsoft Advanced Office Password Breaker Enterprise are available for Microsoft Office 2003 and 2007, Windows Vista and Windows 7. These new databases include not only new versions of common office applications but also Internet Explorer, Mozilla Firefox and Google Chrome. The performance of this cracking algorithm was improved by integrating our proprietary password cracking algorithm with the new passwords formats and
