The entire program's wrapped in a single executable file that can be copied to a USB flash drive and effortlessly launched on any PC without setup. It doesn't change system registry settings. intuitive. Set the current frame rate and add frames You can open a subtitle using the built-in file browser and specify the current frame rate (23.976, 25 or 29.976 FPS). The subtitles can be previewed in the main window, where you can check out the in and out times, along with each line (up to three lines on the screen). It's possible to change the frame rate before saving the new files, as well as to fix desynchronized subtitles by adding any number of frames to all lines at the same time. You can also remove captioning. Unimpressive range of settings Once the settings are made, you can save the converted file to MicroDVD format by just indicating the destination folder and file name. However, this is where Ultimate Subtitle Converter's functionality ends. It doesn't give you the possibility to edit content or manually adjust the input and output times of each line. On top of that, it only allows you to add frames (delaying subtitles), without the possibility to remove them (hastening). Nevertheless, you can test this subtitle conversion tool for yourself.
